Exceeding Limits through Innovation

The new Digital Signage Revolution for single display applications is now available. The iSignage-500 Digital Signage Player System offers flexibility and efficiency in a compact format and allows maximization of Display space and information output through playing multiple media simultaneously on one screen.

Content: Layout and scheduling of media content is easily done together using the license-free Digital Signage Content Management Software that comes with the iSignage-500 player. Drag-and-drop slide-shows, banners, tickers and video windows according to your own screen design.

Updating: Content can be updated in 3 ways: via USB stick, via CF memory card or via LAN network from remote. This unique feature allows for maximum flexibility when installing the iSignage-500 player at Point-of-Sales.

LiveFeed: Alternative to stored video content (playback), the iSignage-500 also allows for display of live-feed in the video-window.

Output: The iSignage-500 has a wide range of output ports for different kinds of displays: VGA, DVI, RCA and S-Video, and thus can be utilized with TVs, Monitors, Projectors and LED Displays.

Storage: All content is stored on a CF (Compact Flash card) which can be accessed via a lockable panel. Optional, a HDD hard-disk drive can be mounted inside the player for larger content requirement
